Making smart decisions

Difficult growing conditions, tight margins and weak commodity prices made 2018 a challenging year for Iowa crop production. Making smart, informed decisions based on the latest research and developing technology takes on greater importance for the success of the farming operation.

The Iowa State University Integrated Crop Management Conference is **Iowa's premier crop production education event**. No other program in Iowa brings together the diverse range of topics, slate of expert presenters and results of the latest University research. Drawing nearly 1,000 of the top crop production professionals from across Iowa and the midwest together for two days to learn, listen and share this is an event you won't want to miss.

Build Your Program

The 2018 program is packed with 38 topics to choose from, across crop, pest, soil fertility, and soil and water management areas.

New Voices

Invited speakers bring fresh information and perspective. See who Iowa State University has gathered together for this year's program.
